

Bringing nature's balance indoors

nanoe™ X, technology with the benefits of hydroxyl radicals

Abundant in nature, hydroxyl radicals (OH) inhibit pollutants such as certain bacteria, viruses, mould, allergens, pollen and hazardous substances.

nanoe™ X technology creates hydroxyl radicals contained in water to clean and deodorise the air that we breathe, as well as treat even tightly woven fabrics such as blinds, carpets and furniture in our indoor environments.

This advanced technology does not require filters or maintenance, making it the ideal solution for homes, public facilities, offices, hospitals and hotels which are desired to improve air quality.
